

Calcium Carbonate Unit CCU-600, 1500

FinCorp Engineering produces a wide variety of Foam processing equipment. Among them is the **Calcium Carbonate Unite** This machine is an essential part of any foam production and conversion plant.

OPERATION: Calcium Carbonate is loaded into the tank via a powder feeder that meters in the powder uniformly. The polyol is pumped into the mixer, the Hi-speed special shear mixer will then turn the mix into a homogeneous mix which will yield excellent foam.

ADVANTAGES: Complete unit, well designed, efficient mixing, and compact.

AVAILABILITY: two models are available: 600 liters and 1500 liters.

The mixer must be used in conjunction with an agitated storage tank for storage and temperature adjustment.

The storage tank with internal mixer and re-circulating pump can also be supplied as a package from Fincorp.

Contact Fincorp for your tank farm needs.
